

EKIBBO SUGGESTED UPDATES TO THE AGROBASE MOBILE AND WEB APPS

- Access rights of three groups of people (management, extension officers and farmers). Therefore, a new user account (farmer) should be created for the mobile app. These should be able to see products that they have sold, quantities, income made and all information concerning their loans as well as transactions.
- Ability to create new passwords for the users when forgotten on the mobile app.
- Loans and inputs (Ability to make deductions and adjust farmer payment figures). Farmer loans are only to be paid back through produce sold. More visibility on the loan amount paid and remaining balance.
- Extension officers' ability to input new farmer contacts during payment.
- Ability of the mobile app to take coordinates of more than 5 points for farmer polygons/farms.
- Farmer profile should include Name, Farmer code, Farmer group, location, contact, farm size, certification type (RFA, Rainforest Alliance and Organic), products sold to EKIBBO, quantity of sales, income earned through sales, has loan or not, farm size and polygon and softcopy farmer IDs that can be printed and include a QR code. It should be ensured that some of these are collected during profiling and all visible for a farmer profile. Farm size should be calculated automatically according to the coordinates since some farmers are not sure about their real farm sizes.
- Data cleaning for previous entries.
- Sales; Categories include inputs (fertilizers, tarpaulins, seedlings, pruning saws) and produce (Hulled coffee, cocoa, cassava, avocado, vanilla and Jackfruit). These should be displayed in the web app with these categories.
- Entry of data on farmer visits and trainings by extension officers. Trainings are to be divided into two, group trainings- which is the existing training module and farm visits which are more of individual trainings.
- A new module called Impact assessment is to be developed used to record farmer answers to see the impact Ekibbo has made on them.
- Farmers should be able to see information from group trainings and individual visits.

- Extension officers and reviewers should be able to see the status (approved/denied/pending) of the uploaded purchases.
- Charges and taxes should also be visible also to extension officers.
- Attach attachments for proof before payment forexample attendance forms to pay transport refund, consent form from farmers who want to change their phone number during payment. This should be added to both the mobile and web applications.
- The farmer groups should display the total number of farmers in the group.
- Addition of more analytics on the Ekibbo web dashboard.

ACTION POINTS

- Ekibbo to share information it needs to be included on the QR code of the farmer ID
- Ekibbo to share the information on analytics to be added on Ekibbo web dashboard.
- Ekibbo to share its workplan with Mobipay to plan for farmer trainings.
- MobiPay to inform Ekibbo after their internal assessment and discussion about when the urgent modifications can be completed and when the overall modifications can be concluded.
- MobiPay to inform Ekibbo intervals at which new modifications can be made.
- Training of farmers by MobiPay.

NB: The highlighted points are the most urgent modifications to be made.
